OBJECTIVE

With a curious mind and purpose of meaningful impact, I build intelligent software by tackling real-world challenges, strengthening my skills in AI and software development & delivering solutions grounded in thoughtful engineering, continuous growth & passion for learning.

EDUCATION

Indiana University - Bloomington

Aug 2023 – May 2025

Master of Science in Computer Science

GPA:3.6/4.0

Coursework: Applied Algorithms, Computer Networks, Machine Learning, Software Engineering, Cloud Computing, Artificial Intelligence

LDRP Institute of Technology and Research

Jul 2019 – Jun 2023

Bachelor of Engineering in Computer Engineering

GPA:8.8/10.0

SKILLS

Programming Languages & Web: Python, JavaScript, TypeScript, C/C++, SQL, HTML, CSS

Frameworks & Libraries: React, Node.js, Express, Django, Flask, Tailwind CSS, TensorFlow, Scikit-learn, Pandas, NumPy

Databases & Tools: PostgreSQL, MySQL, MongoDB, Redis, Supabase, Version Control (Git), Postman, Jira, Tableau

Cloud & DevOps: AWS (S3, Lambda, Glue, Athena, QuickSight), GCP, Docker, Kubernetes, GitHub Actions

WORK EXPERIENCE

Software Engineer Intern | Dream Leo

Sep 2022 - Feb 2023

- Improved website performance by 40% for 100+ daily users by resolving bottlenecks in React components, implementing lazy loading, and eliminating redundant API calls resulting in faster page loads, improved Google Page Speed scores, and better SEO.
- Partnered with UI/UX designers, business analysts, and developers to redesign site navigation and layout, while conducting peer code reviews and debugging layout issues to uphold code quality, leading to a 30% increase in user retention.
- Strengthened backend infrastructure by implementing Redis caching, optimizing SQL queries, and restructuring API endpoints reducing server response time by 35%, cutting downtime by 50% by switching to a stable downgraded version, and improving system scalability.

Software Engineer Intern | Capgemini

Jul 2022 - Aug 2022

- Built an automated resume data extraction system using Python, reducing manual data entry time from 5 min to 1 min and improving accuracy by 40% by streamlining data processing, minimizing errors, summarized information retrieval using contouring and NLP.
- Led weekly Agile sprints as Scrum Master, guiding a team in building an AI-driven full-stack resume analysis platform using the MERN stack and Bootstrap, while improving sprint velocity by 30% through structured sprint planning in JIRA and peer code reviews.
- Engineered a data extraction pipeline that achieved 95% accuracy by integrating HaarCascade for image recognition, Bounding Box algorithms for structured data parsing, and custom Regex and name extraction models to reduce misclassification and boost precision.

Data Scientist Intern | BrainyBeam

Jun 2022 - Jul 2022

- Built a tweet sentiment classifier using SVM and Naive Bayes, improving accuracy by 30% through custom preprocessing, feature engineering, and model tuning—integrated version control and testing to ensure clean, reliable outputs.
- Created sentiment trend reports in Python and refined labels through manual annotation, boosting precision by 25% and helping non-technical teams understand public opinion for better business decisions.

PROJECT EXPERIENCE

Course Compass: Built an AI-powered course recommendation platform using React, Tailwind CSS, MongoDB, Vite and Gemini API to guide students in selecting courses aligned with their career goals. Implemented a chatbot using prompt engineering to suggest alternatives and ensure focused, in-scope responses. Designed features to validate course prerequisites, credit limits, and schedule conflicts before allowing wishlist additions. Provided personalized roadmaps to help students visualize their academic and career paths.

Flight Booking System- VacayBuddy: Developed a user-friendly travel platform using React for the frontend and MongoDB/Redis for the backend, offering flight booking, itinerary planning, and personalized travel recommendations. Enhanced performance by building a Redis-based caching system for faster data retrieval. Streamlined deployment using Docker, set up a CI/CD pipeline, tested on Jest, API creation on Postman and deployed on Heroku, reducing deployment time and ensuring the platform scaled efficiently to handle high traffic load.

FixYourResume: Created a web application using TypeScript and React that helps users improve their resumes. Users can upload their resume and add the Job Description in a text box. The app uses Gemini AI to compare the resume with the JD and find missing skills or experiences. It gives simple suggestions to make the resume better and more relevant for the job.

LEADERSHIP AND CO-CURRICULAR ACTIVITY

Luddy Hackathon – 2nd Runner-Up: Recognized for building *Course Compass*, an AI course planner. [\[Link\]](#)

CEWIT Lead Intern: Leading Women Who Code alliance at IU, organizing workshops, developing problem solving skills, managing interns, and collaborating with organizations to promote diversity in tech, with 9 months of experience. [\[Link\]](#)

Break The Barrier: Organized a national level hackathon, managing website development and event operations. [\[Link\]](#)

Google Cloud Contributor: Earned Silver League badge for the Google Cloud platform [\[Link\]](#)
